Do you suffer from ringing in the ears (tinnitus)?

Did you forget your ear protection?

Did your symptoms start within the last 3 months?

If so, you may be able to take part in a clinical research study testing an investigational drug in people with tinnitus.

After thorough examination, the study drug will be applied directly into the ear.

Participation in the trial is possible if you are:

- Between 18 and 75 years old
- Suffering from tinnitus following an injury to your inner ear or middle ear infection.

For further information about the study please contact your doctor or look at www.tinnitus-study.info
